

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

Board Public Meeting Agenda

This is the third in a series of public meetings highlighting the need for the Department of Energy (DOE) and the National Nuclear Security Administration (NNSA) to complete commitments made in Board Recommendation 2004-1, *Oversight of Complex, High-Hazard Nuclear Operations*. Recommendation 2004-1 was designed to strengthen federal safety assurance, to utilize lessons learned from internal and external operating experience, and to reconfirm Integrated Safety Management (ISM) as the foundation for the Department's safety management approach along with effectively addressing identified weaknesses in ISM implementation.

In this meeting and hearing, the Board will explore in more depth federal safety management and oversight policies being developed by DOE and NNSA for defense nuclear facilities. DOE and NNSA senior leaders will articulate their views on the role of line and independent oversight to safely accomplish their work at defense nuclear facilities and how the implementation of ISM will be improved. The Board will examine DOE's and NNSA's new approach to federal oversight and its relationship to contractor assurance systems.
